

To Clean & Protect Use **NOWS** No. 1

Gently cleans all plastics without scratching. Leaves a lustrous shine that resists fogging, repels dust, and eliminates static.

- Resists finger marking
- Contains no abrasives or harsh chemicals
- Leaves a smooth, clean, greaseless shine

NOWS No. 1 Cleans, Shines, and Protects **All** Plastics

1. If **the** surface is extremely *dirty*, apply **NOWS No. 1** liberally and **wipe** using long, sweeping strokes. Do not use pressure at **this** time or large dirt particles may scratch the plastic.
2. Re-apply **NOWS No. 1**. Polish using short, circular strokes with a clean **portion** of the cloth.
3. **When** surface is thoroughly clean and uniformly covered, buff to a slippery glaze with a clean portion of the cloth. surfaces buffed to a **high glaze** are more resistant to dust and future scratching.
4. Reapply **NOWS No. 1** regularly to maintain the antistatic, smudge and scratch resistant properties.

NOWS Polish Hates: The type of polishing cloth you use will make a difference. The ideal cloth is nonabrasive, absorbent, and lint free. To eliminate any chance of scratching, use only disposable cloths. Reusable cloths can **retain** abrasive particles, but you won't know for sure until the damage is done. **NOWS Polish Mates** are sold in convenient **6-Packs** or in bulk. If **NOWS Polish Mates** are not available, use a soft cotton cloth (such as a diaper), avoid using polyester or rayon wipes which can scratch unprotected plastic.

To Restore & Refinish Use **NOWS** No. 2

Removes fine scratches, haziness and abrasions from most plastics. With repeated use, **NOWS No. 2** restores faded and discolored plastics.

- Removes the damage instead of filling it in
- Buffs out quickly
- After restoring, seals with a coat of polish

NOWS No. 2 Removes **Fine Scratches** from Most Plastics

1. Observe condition of the surface to be treated. The deeper the scratches, the greater the pressure required to remove them. If the surface is dirty, clean with **NOWS No. 1** before applying **NOWS No. 2**.
2. Shake Well. Test in an inconspicuous area.
3. Apply **NOWS No. 2** liberally. Using a clean, soft cloth, polish with a firm back-and-forth motion at right angles to the scratches. Keep the cloth saturated with polish at all times.
4. **When** the worst scratches have been polished out, reapply **NOWS No. 2** uniformly in a circular motion to the entire surface using short, circular strokes and light pressure. Allow to dry to a **light haze**.
5. Using a clean portion of the cloth, buff the surface to a slippery glaze using firm, short strokes. This procedure is imperative in achieving the best results.
6. For heavy scratches, multiple applications of **NOWS No. 2** or an application of **NOWS No. 3** may be required.
7. Follow with **NOWS NO. 1** for best results.

Polishing Tip: If the damaged area is fairly large or badly damaged, a power buffer may be used with **NOVUS No. 2** and **No. 3**. Use a clean wool or cotton bonnet and operate the buffer at a low speed to avoid overheating the plastic, approximately 1,000 **RPM**. Each polish should be applied with a separate, clean bonnet.

To Repair & Prepare Use **NOWS** No. 3

Removes heavy scratches and abrasions from most acrylic surfaces. Use when damage is too severe to be restored with **NOWS No. 2** polish

- Requires use of **NOWS No. 2** for final finishing
- Not recommended for use on coated plastics

NOWS No. 3 Removes **Heavy Scratches** from Most Acrylics

1. Remove surface dirt and dust with **NOWS No. 1**.
2. Shake well. Test in an inconspicuous area.
3. Apply **NOWS No. 3** liberally. Using a clean, soft cloth, polish with a firm back-and-forth motion at right angles to the scratches. Keep the cloth saturated with polish at **all** times.
4. Continue polishing until only **fine** scratches remain. Using cloth, remove all remaining polish, **this is very important!**
5. Using a clean cloth, apply **NOWS No. 2** in a **circular** motion uniformly to entire surface. Polish using light pressure until **NOWS No. 2** dries to a light haze.
6. Using a clean portion of the cloth, buff the surface clean. Follow with **NOWS No. 1** for best results.

Important Points to Remember: Before attempting to clean or remove scratches, always make sure the plastic is cool to the touch. Use a liberal amount of plastic cleaner to safely remove surface dust and dirt. In addition, test scratch removers in a small or inconspicuous area for compatibility. Some plastics are coated with a **thin film** which may be damaged by the abrasives in the polish. **NOWS No. 2** and **No. 3** are not recommended for use on eyeglass lenses.
